1. This report is the international preliminary examination report, established by this International Preliminary Examining				
Authority under Article 35 and transmitted to the applicant according to Article 36.				
2. This REPORT consists of a total of 4 sheets, including this cover sheet.				
3. This report is also accompanied by ANNEXES, comprising:				
a. sent to the applicant and to the International Bureau) a total of sheets, as follows:				
sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).				
sheets which superse beyond the disclosur Supplemental Box.	ede earlier sheets, but w e in the international app	hich this Authority consideration as filed, as indic	ders contain an amendment that goes ated in item 4 of Box No. I and the	
b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)), containing a				
sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental				
Box Relating to Sequence	e Listing (see Section 80	2 of the Administrative I	nstructions).

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/IT2004/000360

_	Box No. I Basis of the repor	t	
 With regard to the language, this report is based on the international application in the language in wh filed, unless otherwise indicated under this item. 			
	which is the language of a international search (un publication of the intern	nslations from the original language into the following language , translation furnished for the purposes of: der Rules 12.3 and 23.1(b)) ational application (under Rule 12.4) v examination (under Rules 55.2 and/or 55.3)	
2.	With regard to the elements* on have been furnished to the receive report as "originally filed" and a	f the international application, this report is based on (replacement sheets which eiving Office in response to an invitation under Article 14 are referred to in this re not annexed to this report):	
	Description, Pages		
	1-10	as originally filed	
	Claims, Numbers		
	1-8	as originally filed	
	Drawings, Sheets		
	1/4-4/4	as originally filed	
	a sequence listing and/or a	ny related table(s) - see Supplemental Box Relating to Sequence Listing	
3.	. ☐ The amendments have resulted in the cancellation of: ☐ the description, pages ☐ the claims, Nos. ☐ the drawings, sheets/figs ☐ the sequence listing (specify): ☐ any table(s) related to sequence listing (specify):		
4.	 □ This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)). □ the description, pages □ the claims, Nos. □ the drawings, sheets/figs □ the sequence listing (specify): □ any table(s) related to sequence listing (specify): 		
	* If item 4 applies, s	ome or all of these sheets may be marked "superseded."

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/IT2004/000360

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: EP 1 231 070A D2: JP 2001 206 602A

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1 and 8 does not involve an inventive step in the sense of Article 33(3) PCT.

Document D1 regarded as being the closest prior art to the subject-matter of claims 1 and 8, discloses (the references in parentheses applying to this document):

A POS-printer for receipts made from a paper tape wound on a roll (S) placed in a housing (2), the printer being able to assume different positions, horizontal and vertical.

The printer has a paper-near-end detector with a sensor means (30) comprising two projecting elements (33A, 33B) for engaging the paper roll, respectively when the printer is in a first (horizonta) position, or in a second (vertical) position.

The subject-matter of claims 1 and 8 therefore differs from this known POS-printer in that the projecting elements engage a hole in a sprocket of the paper roll.

The problem to be solved by the present invention may therefore be regarded as determining the location of the paper-near-end detection.

The solution proposed in claims 1 and 8 of the present application cannot be considered as involving an inventive step (Article 33(3) PCT). D2 shows a paper-near-end sensor displaced in the inside of a hollow core part of the paper roll when the diameter of the paper roll becomes lower than a designated value. The skilled person would therefore regard it as a normal option to include this feature in the POS-printer described in document D1 in order to solve the problem posed.

Dependent claims 2-7 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step, see documents cited in the search report.
